NECRON SERAPTEK HEAVY CONSTRUCT

Armed with a pair of formidable heavy weapons, the Necron Seraptek Heavy Construct can unleash energies capable of disintegrating both organic and machine matter. Those rare few among the Imperium who have survived an encounter with a Seraptek have testified to its unnatural speed and agility, and the near-total dominance it seems to hold over the lesser Canoptek-class constructs within its sight. None know to what end this colossus of war was originally intended to serve, though few can deny the devastation it wreaks once it takes to the battlefield.

THIS IS NOT A TOY

Not suitable for children under 15 years of age.

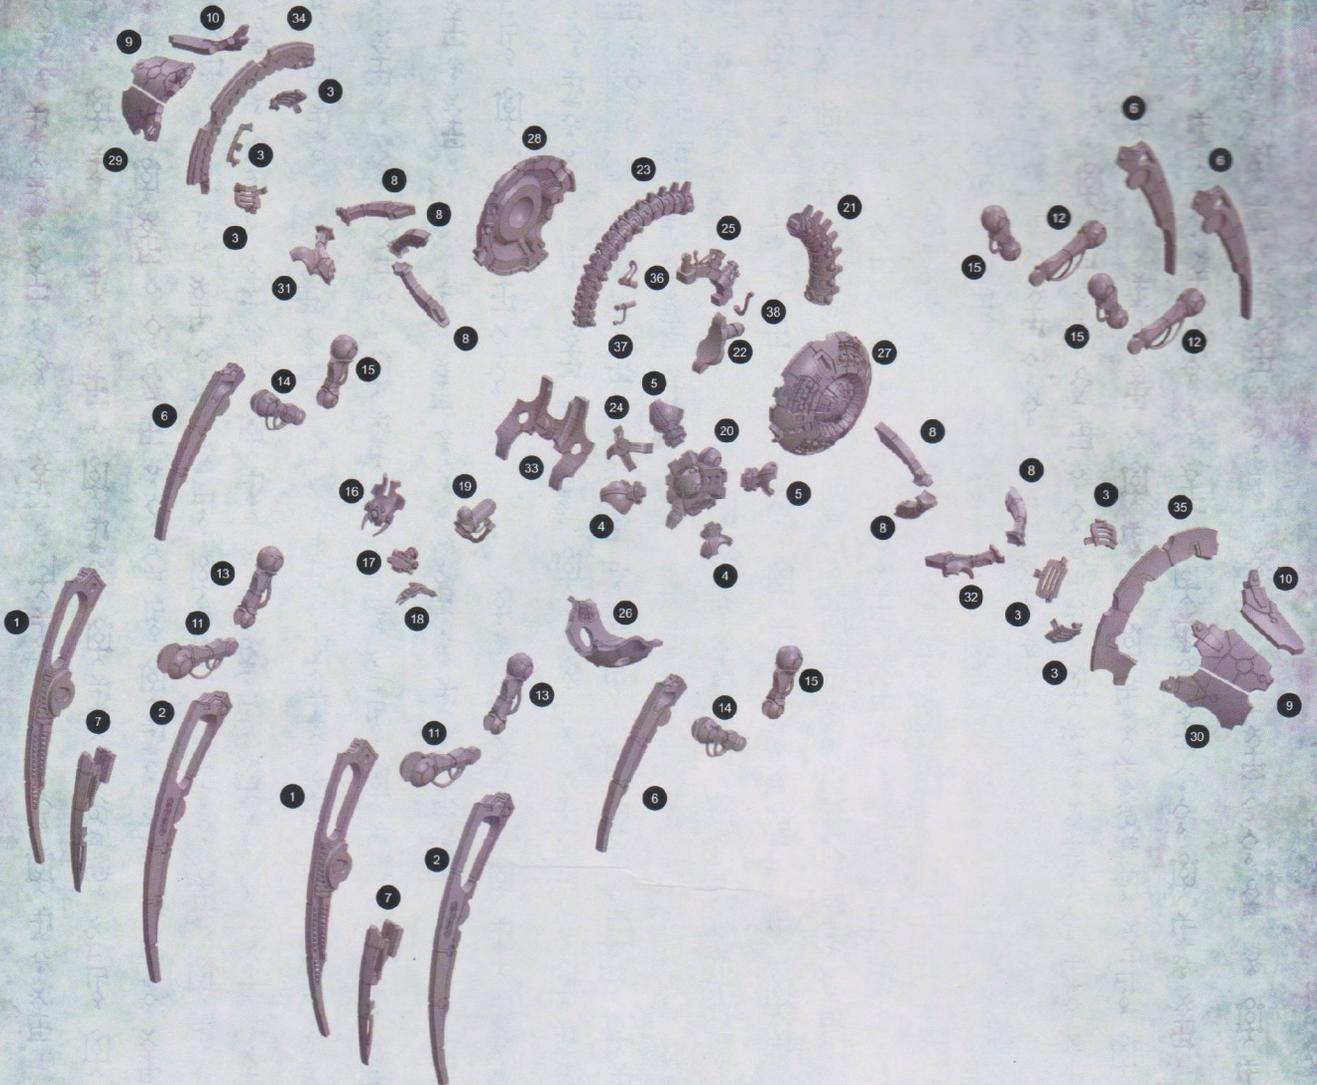

WARNING: Resin dust can be harmful if inhaled. Always wear a dust mask or respirator when sanding or sawing resin parts.

Preparing the Model for Assembly

Before assembling the model, wash each part thoroughly with an abrasive brush, such as a toothbrush, to remove any model release agent that may still be on the surface of the parts. Then, remove any excess resin such as mould lines, casting gates, vents and shims. For a more detailed guide to working with resin models, go to the Downloads section of the Forge World website.

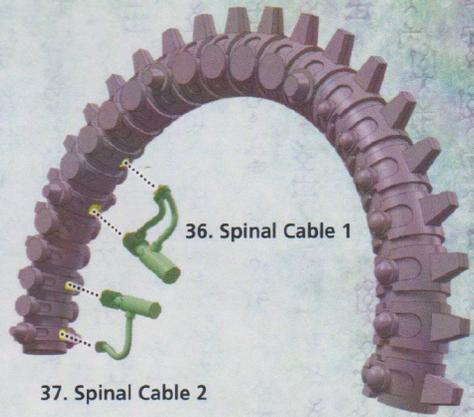

This kit contains all the pieces required to construct the Necron Seraptek Heavy Construct. To glue the resin pieces together, use Citadel Super Glue.

NOTE: We have cast this kit using advanced techniques and the best quality resin, but due to the nature of the casting process, your model may contain small air bubbles. These can easily be filled with model filler or super glue. Any slight warpage of thin parts can be corrected by immersing the part in hot water for about 1 minute, then bending it back into shape.
