6

If you want the model on the Scenic base to be removable from the Diorama base, do not glue parts 18. Diorama Base 1 and 19. Diorama Base 2 together.

This diagram illustrates the exploded view of the prosthetic device assembly. The components are labeled as follows:

- 16**: A central grey component, likely the main body or housing, featuring a yellow rectangular area on its top surface.
- 17**: A small green component, possibly a connector or a small housing part, located above the main body.
- 18**: A large green component, likely the main housing or base, located on the left side.
- 19**: A large green component, likely the main housing or base, located on the right side.
- 40mm Base**: A grey circular base located at the bottom center of the assembly.

Dashed arrows indicate the assembly sequence and alignment of the components. The main body (16) is positioned above the 40mm Base. The large green components (18 and 19) are positioned on either side of the base, and the small green component (17) is positioned above the main body.
